

Partial 1 Recap

Mitsiu Alejandro Carreño
Sarabia

■ Course structure Partial test

- 1st Partial = 30%
 - Autoevaluation = 5%
 - Theoretical evaluation = 40%
 - Practical evaluation = 55%

Agenda

- Autoevaluation
- Token system
- Recap
- Evaluation

Autoevaluation

Using your @alumnos.upa.edu.mx email answer the following form:
<https://forms.gle/hXf7KbSB9Sp7sa9b8>

Token system

Mit managed

- All tokens are spent on the current partial

Self managed

- You allocate or reserve tokens prior evaluations, non changeable decision.

Recap

- Function
 - What is it?
 - Which syntax/keywords does it use?
- Parameter
 - How is it usefull?
 - Which syntax/keywords does it use?
- Class
 - What is it?
 - Which syntax/keywords does it use?
- Object (instance)
 - What is it?
 - Which syntax/keywords does it use?
- Constructor
 - What is it?
 - How is it usefull?
 - Which syntax/keywords does it use?
- Http Status code
 - How is it segmented?
 - What's the meaning of each segment?

Recap

- Http methods
 - Which exists (CRUD)?
 - Which operation/action do they perform
- Json
 - What does `[]` means in JSON
 - What does `{ }` means in JSON
 - How is `:` used in JSON
- Client-Server
 - What's the difference between client & server
 - What are the benefits of this model?
 - Describe in chronological order the interaction between them

Recap Practical

```
app.get("/objects/:id", (req, res)=>{  
  return res.send("buscando:" + req.params.id);  
});
```

Code rules:

1. app is an instance of App class
2. req is an instance of Request class
3. res is an instance of Response class
4. params is a json with an attribute id

Evaluation

Now it's show off time!
